"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the morning, and it remains with the light of the stars of the night. BIG VALUE

Tipp City, Ohio, Mar. 30, 1953
Dear Sirs: I have always had good results with your seeds and I get more pleasure from your "Flower Book" than any other. I appreciate your 10c packets of seeds—Where else today, can you get so much for so little? I like to have a variety of flowers and get all the plants I can use (& usually give away some to friends) from a 10c packet. Respectfully, Mrs. W. C. Barnhart

WM. J. PARK, V. Pres.
Grows the plants for you.

DEAR PATRON FRIENDS

"The Peace of the Garden" expresses itself in terms of friendship. These repeated greetings, and the many pleasant letters that come to us every day have brought us into the happy relationship of friends. In behalf of all of us at The Geo. W. Park Seed Co., I wish to thank each of you for your kind expressions as well as your continued patronage.

Faith has made this country great. It will take faith in God to keep it that way. Faith, our greatest heritage, freely taught us in places of worship, and at hearthstones throughout the land, may well be enhanced by gardening. For, who can prepare the soil, watch the magic of life transformed from a tiny seed into beauty unmatched by human hands, without searching deeply into mind and soul for closer contact with the Supreme Being.

May this new year bring much joy and peace to each of you. Peace in heart and mind, yes, and peace in the world too, — for we believe with our beloved founder and our great country's founding fathers that "If you have faith as a grain of mustard seed, . . . nothing shall be impossible unto you."

On page 4 we have pictured the new, and much improved, facilities just completed. They will enable us to serve you even better in the future.

You, our friends, have made these buildings possible by your continued patronage, and your friendly encouraging words, over a period of many, many years. Please accept our deep gratitude and our pledge to ever serve you better in the years ahead. Behind it all, we realize that, without God's help, this accomplishment would not have been possible. We want to acknowledge our thanks to Him, "the Giver of every good and perfect gift."

During the course of the past 86 years, this business, founded in 1868 by Geo. W. Park, has served members of many families during each of three generations. The Geo. W. Park Seed Company has grown along with our great United States, so that now with these years of experience to draw on, and an organization built up over a long period of time, we are prepared to offer you the finest seeds and bulbs grown in the world today, and the best of service.

It is a special pleasure, this year, to hand you our Flower Book, revised and improved in various ways to make it more attractive and useful to you in the selection of your seeds and the care of your plants.

I wish you all success and pleasure in your gardening.

Floricordially yours,

GEO. B. PARK, President

TO INSURE YOUR SUCCESS

1—The Seeds We Sell Are All of the New Crop.

Grown by specialists in many parts of the world, **TESTED FOR GERMINATION AND PURITY.** Sure to grow and give you the finest results.

It takes no more time and effort to grow seeds from the best strains, so start with the best and save disappointment at flowering time by ordering direct from Park.

2—to Prevent Disease and "Damping Off".

Nearly all soils contain harmful fungi, which if not controlled, attack the seed and cause what is known as "Damping Off" (This usually happens just before or just after the baby plants emerge from the ground). Also there are present on the surface of most seeds certain pathogenic fungi which, if not destroyed, cause the seed to decay. (This is especially true in cold damp weather.) These often account for poor, uneven stands and weak, non-vigorous young plants. Fortunately, in recent years agricultural scientists have shown that certain chemicals will destroy the disease organisms and protect the seed from attack by organisms present in the soil.

AS A REGULAR PARK SERVICE

WE TREAT ALL VARIETIES OF 82 Species of FLOWER SEEDS (This includes the greater part of those we offer) and **ALL VARIETIES OF VEG-ETABLE SEEDS** with the most efficient Seed Treatments as recommended by Experiment Stations. Huge flowers are produced on long erect stems. The color range is superb. There is a tendency toward the handsome deeper tones of red and blue, but it is well balanced with lighter yellows, whites, light blues. 60 seeds 25c; 300 seeds \$1.00; 1/32 oz. GIANT PANSIES

A PARK SPECIALTY

Pansies are well and favorably known, so that a description of their exquisite beauty, and usefulness in the garden is unnecessary. They are simply indispensable, and if we were to name a half dozen of our best seedling flowers, the Pansy would be one of them. There is, however, much difference in the strains, some being greatly superior in vigor and free-blooming quality to other plants as well as the great size, form, variety, and richness of colors and variations. We are pleased to say that the seeds we offer are from Pansy specialists, all of the new crop, and cannot be surpassed in quality, regardless of claim or prize.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsams, Cosmos, Calendula, Candytuft, Oriental Pinks, Gailardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valerian, Verbena and Zinnia; for vines get Coboea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these it is well to prepare the bed carefully in a sunny exposure; place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants.

TO INSURE SUCCESS. Many failures with seeds are due to lack of knowledge of the time required by the seeds to germinate. Study the table on pages 45 and 46 to avoid failures from this cause. Follow instructions in the "Gardener's Handbook."

Victorious All Double

Petunia, All Double America

Thrill to the Lively Beauty of Fine PETUNIAS

The All Purpose Flower: For lovely beds, attractive borders, cutting, charming porch boxes, winter pot plants.

A Type and Color to please every taste: All Doubles, Giant ruffled singles, Plain edged giants, Small prolific singles. Pink, yellow, red, rose, purple, lavender, blue, white. Dwarf or tall, spreading or compact.

Petunias stand pre-eminent as a hardy, beautiful, all purpose flowering plant. Readily started from seed, they soon come into bloom, becoming a glowing mass of exquisite, showy, and deliciously fragrant flowers, in bloom from early summer until frost. They may be started in fall or early winter indoors to make blooming window plants for late winter and very early spring. *Don't omit these beauties from your list.*

GIANT DOUBLE PETUNIAS Now in Complete Color Range

With the Return of the foreign-grown All Double Victorious Strain, which has not been available since 1943, and with the American-Grown All American All Doubles introduced in the past few years, we are glad to offer again a complete color range in Double Petunias. The seeds are necessarily very expensive due to the fact that they have to be carefully hand pollinated and there is real art and scientific knowledge required to produce seed which will give consistently Double flowers. The seed are smaller and the seedlings weaker than the Single kinds, so require more care in starting.

Soil should be sterilized by pouring water thru it twenty-four hours before planting, and the little seeds planted on the surface of the soil. Then follow directions on pg. 3 and 4 of the "Gardener's Handbook" sent free with your order. The seeds are very tiny, and the 25c packets, contain only a few seeds as noted in the description. We suggest that you obtain the larger packets, but list the 25c packets in keeping with our price policy. **After the All Double Petunias get past the baby plant stage they are quite vigorous and can "take it" even where summers are hot.**

PETUNIA CULTURE

This is covered more fully on page 11 of "The Gardener's Handbook" sent free with your order. We treat all seeds of Petunias with Semesan to help prevent "damping off" which together with covering too deeply causes more failures than anything else. The seed may be sown indoors about 8 weeks before your usual outdoor planting time to give you blooming plants in early June, and because the seed are small should be sown in boxes and transplanted even when planting late.

ZINNIAS are of easiest culture. When plants are a few inches high, keep well cultivated and give thorough soaking every two weeks.

It is easy of culture, growing in almost any soil and sunny situation, begins to bloom when small and, if freely cut, will continue for a long period. Flowers are rich and colorful, deliciously fragrant, and are freely borne on long stems. Excellent for cutting. CULTURAL DIRECTIONS pg. 10 "Gardener's Handbook."

Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

NEW HEAT RESISTANT SWEET PEAS

CUTHBERTSON'S STRAIN

Flowers in Hot Weather

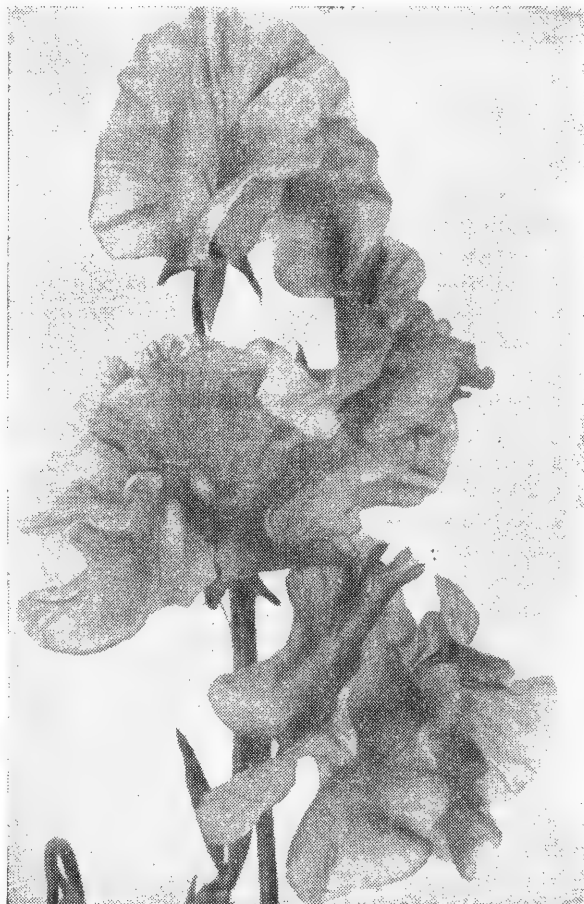

Not only do they continue blooming long after hot weather has come and other sweet peas have died, but they begin blooming two weeks ahead of the Standard Spencers. The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

2003—Carol, Clear Pink; 2004—Coline, Scarlet; 2005—Janet, Pure White; 2006—Frank G, Lavender; 2007—Tommy, Mid Blue; 1992—William, White with Pink pinsteed edge, large very fragrant. Pkt. 10c; 25c; 1 oz. 85c.

2002—CUTHBERTSON'S HEAT RESISTANT SPRING FLOWERING BLENDED MIXTURE.

A balanced blend containing the above varieties and all other named varieties in this class to give a most complete color range. Pkt. 10c; Large Pkt. 25c; 1 oz. 45c; oz. 75c; 1/4 lb. \$2.00.

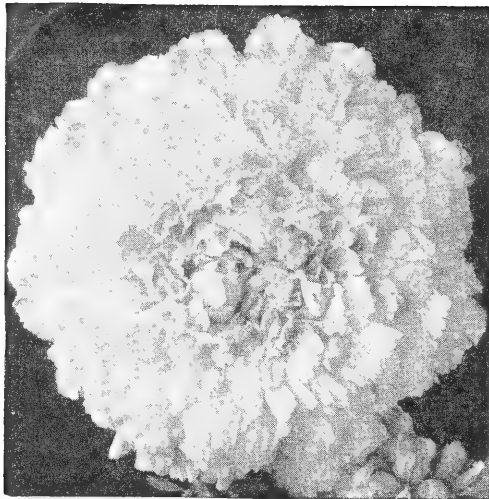

See pg. 3 for "The Sweet Peas of the Future," Zvolanek's.

CUTHBERTSON'S Heat Resistant Sweet Peas

Dear Sirs: June 19, 1953, St. Louis, Mo. I had grand success with your Cuthbertson's Sweet Peas. They have been in bloom a month. Each day, I pick a huge bouquet and the colors are exquisite. Not a dry leaf on them and other years my Sweet Peas were just gone by now.

CHOICE FLOWER SEEDS—PART ONE

ANNUALS and PERENNIALS

Blooming the First Season

ANNUAL FLOWERS are those which grow, bloom, seed and die in one season. There are attractive annuals for every purpose. Some are fine for cutting, others for beds or borders, rock plants and climbers. We have listed in Part 1 the finest of all Annuals, and the perennials which may be treated as annuals in that they will bloom the first season from seed.

HARDY FLOWERS are those which may be sown in early spring as soon as the ground may be worked, or in fall to come up with the first breath of spring for earlier blooms. Hardy perennials and biennials may be planted in July or August and transplanted to permanent location about 1 month before frost where they live over with the protection of a mulch to give bloom in the spring. We think it best to sow perennials and biennials in the spring so that they can become better established before winter.

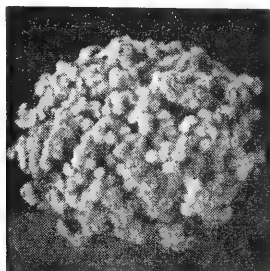

HALF HARDY FLOWERS listed with the symbol hh may be started early indoors for early bloom, or they may be planted outside when danger of frost is over. Half Hardy perennials need winter protection in the Northern states.

As cut-flowers they are fashionable, and last well in vases. The plants are so readily started from seeds, bloom so early the first season and are so easily grown under almost any condition that they merit a high place in every selection of choice annual flowers. PARK'S PERENNIAL FLOWER SEEDS

FOR PERMANENCE AND CHARM

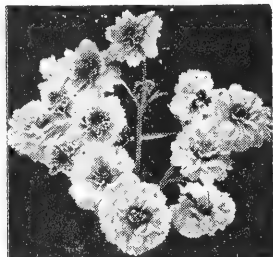

These are valuable subjects of the flower garden, as most of them are not only showy and beautiful when in bloom, but will do service year after year for a long period, enduring cold, excessive rain and drought, regardless of neglect and improper attention. They are easily grown from seeds. Thorough preparation of bed and good care, will award you with everlasting beauty.

Directions for making outdoor beds and sowing seeds are sent with every order.

Hp. HARDY PERENNIALS are hardy plants which will live and bloom every year for a long period. Plants grow to the flowering stage each year and die down again to the roots which remain alive but dormant until the next season. They are very valuable for borders and cut flowers, and once established require less care than the annuals.

Hb—HARDY BIENNIALS are those which bloom the second year from seed, then die. For a continuous display of this type, seed must be sown every year.

PRIMROSE CULTURAL NOTES

Sow in pots or pans as early in the year as possible, water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

TO CONTROL "DAMPING OFF"

"Damping Off" is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned. It may be overcome by treating the seed (We do this for you as an extra "Park Service"), and sterilizing the soil. (Bake in the oven or pour boiling water thru it 24 hrs. prior to planting.)

Where sterilizing is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution (1-3 oz. to gallon of water). We offer **SEMESAN** in 2 oz. Pkts. for 75c. This is enough to spray 240 square feet.

Park's

GIANT DAHLIAS

Are easily grown from Park's strong tubers.

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms. **EXHIBITION DAHLIAS.** Exhibition Dahlias and satisfactory tubers cannot be produced in the same hill. If you want 12 inch flowers, go after them with fertilizer, water and disbudding.

INDEX, GERMINATION and CULTURE GUIDE

When sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. The following table gives the time normally required for germination of each variety of seeds. This time may vary as much as 25% either way. Do not condemn seeds until you have given them at least two or three trials. Those marked z or having the dagger (†) beside them may lie dormant for a year or more. The other tables are self explanatory, and while they are somewhat complicated, do give a great deal of information about each of the hundreds of species listed.
